

Kernel

User Space

A client (application or driver plugin) using the AVC user client. The client is driving an AVC device on the bus. AVC commands pass through the `IOFireWireAVCLibUnitInterface` to the `IOFireWireAVCUserClient`. The `IOFireWireAVCProtocolUserClient` allows the client to see PCR transactions and AVC requests. The greyed out classes are not participating. The standard FireWire user client can be optionally used in cooperation with the AVC user client as shown.
